

Sprint3 Report

- Product name: Foodie More
- Team name: Four-gangs
- Sprint 3 due: June.5 2017
- Revision number: 1
- Revision date: June.5 2017

Action to stop doing:

- Add too much features

Action to start doing:

- No new action to start

Action to keep doing:

- More final tests for each feature that has achieved
- Keep using slack for communication and prepare for final presentation
- Discuss and summarize the experience of using the Scrum

Work Completed:

1. As a developer, I need to add current waiting time information so that the seller can update and user can view while they are browsing the App.
 - Add a function to seller part which can upload waiting time to Firebase
 - Proper establish connection to the database to get waiting time
2. As a user, I am able to check out the order.
 - Successful implement Paypal API.
3. As a seller, I am able to accept the order and send an order information.
 - Add a function which could upload information of order to Firebase after successful checking out.
4. As a developer, I am able to use the Google API to add distance to current location.
 - Successful implement Google API.

Work Not Completed:

1. As a developer, user can sort based on the distance.

Distance will be obtained after choosing a restaurant so we could not sort based on the distance.

2. The server part does not work after we update APIs and we could not solve the problems so we use Firebase instead of it. Our current project is totally based on Firebase.

Work Completion Rate:

- Total User Stories Complete

3/4

- Total User Story Tasks Completed

21/23

Final Burn-Up Chart
